

Tech Driven Innovation

Introduction of a new TECH2X course

TECH DRIVEN INNOVATION (TDX)

- **Interdisciplinary, challenge-based course** focused on solving real-life innovation problems as a team
- Learning happens through an **experimental, prototype-driven process**
- Students **navigate the innovation process independently**
- Course goal: identify **disruptive applications and business models** based on emerging technologies from TH-MA labs
- **T2X starts with the technology**

Roles

Who's involved?

The Actors

Interdisciplinary Students

Multidisciplinary teams (of 4-5 students) investigate, test and design new market applications of the assigned technology

Tech Partners

The founding research groups of the technology support the team of students who will work on it along the way

Teaching Team

Inno.space coaches, experts in the methodology, support adoption of the process and facilitate interaction between students and tech partners

Teaching Team

Prof. Kirstin Kohler

Main Coordinator at
inno.space
Professor in
Computer Science

**Chutimon Hnudee
Espedal**

Course Co-
ordinator and
Educator at
inno.space

Manuel Walter

Educator and
Prototyping Pro
at inno.space

Laurin Knapp

Research
Associate at
inno.space

Schedule

Timeline, Important Dates, etc.

Project Phases

**Opportunities
Identification**

**User
Research**

**Solution
Concept Design**

Timeline

Students' Commitment

It is about 300 total hours, including 200 hours of project work
60 hours of lectures/coaching

Weekly

Monthly

Tech Partner Alignment

On demand – about 1h every 2 weeks

Presentation

Milestones and rehearsals

Deep Dive

CERN IdeaSquare Visit

Pedagogy

Tech to Market Process

Approach

- Experimentation driven
 - The right problem first
- > the right solution follows

Atmosphere, Aura & Energy

- Playful collaboration and group creativity
- Freedom to move beyond everyday organization
- A safe space for exploration

Example

Example of Deep-Tech:

- Identify what the technology offers
- > Here with ATTRACT Technology HipMED

Example

Example Solution from Student Project:

Rapid Blood Analysis (RBA) device, presented in the form of a compact bracelet

Leveraging the power of the Attract technology HIP-MED, the CERN database Remus and a personalized drug administration system, the RBA device provides comprehensive support to patients throughout their recovery journey.

Fig. 1: 3D model of the RBA bracelet prototype

How you will be evaluated

50%

Project Outcome

Deliverables demonstrating depth in
the analysis and the solution

30%

Learning Journey

Engagement with the
innovation process

20%

Participation

Active and constructive
contribution and engagement
with the material

Spaces

In Person Collaboration

inno.space for groupwork

maker.space for prototyping
